

PACKAGING, WEIGHT AND VOLUME, WEIGHT CALCULATION FOR AIR PARCELS

Parcels must be securely packaged, preferably in a cardboard box, with name and address of both the sender and the recipient - must be written on 2 (two) sides of a parcel.

Meest Corporation does not cover damages to the contents of the parcels. Please notify our agents if you have any fragile items in the parcels and they will assist you in packaging them securely.

The maximum size of parcel: either side cannot exceed 1.05 m (41"), weight of parcel may be less than 5 kg, but the cost of shipping is as for 5 kg.

The cost of your package can be affected by the amount of space that it occupies on an aircraft, rather than the actual weight. To determine the cost of shipping by AIR, the greater of the actual weight or dimensional weight is utilized.

The following are formulas for the dimensional weight in lbs. and kg*

$$\text{Dimensional Weight (lbs)} = \text{L (in)} \times \text{W (in)} \times \text{H (in)} / 139$$
$$\text{Dimensional Weight (kg)} = \text{L (cm)} \times \text{W (cm)} \times \text{H (cm)} / 5\,000$$

$$\text{EX: } 50 \text{ CM} \times 30 \text{ CM} \times 100 \text{ CM} : 5000 = 30 \text{ KG}$$
